

# Rituximab: zero to complete substitution after reference delisting

Observed series. Share was identically zero for 127 months to October 2019 and reached 100% by October 2023.

No fitted regression is shown; a linear segmented model on a bounded share exceeded 100% and did not track the observed curve.

Red dashed lines: policy dates. Grey dotted lines: structural breaks located by Bai-Perron detection, without reference to the policy calendar.
